Jaipur, Rajasthan, India — asharma800077@gmail.com — +91 91666 97613 — [LinkedIn](#)

SUMMARY

Computer Science undergraduate with hands-on experience in AI-assisted full-stack development, machine learning, and statistical analysis. Built and deployed production-ready web applications using React.js, Python, Flask, and Supabase, leveraging Generative AI throughout the software development lifecycle. Developed Python-based quantitative analytics tools applying Z-Score, regression, and rolling statistical models to evaluate commodity spreads. Completed a Market Analyst Internship at Axxela Research & Analytics, supporting futures trading, market analysis and algorithmic trading operations. Passionate about building data-driven solutions at the intersection of software engineering, AI, and finance.

EDUCATION

B.Tech in Computer Science and Engineering, Vellore Institute of Technology (2022 – Present) — CGPA: 7.87

EXPERIENCE

Market Analyst Intern

Jan 2026 – July 2026

Axxela Research & Analytics, Mumbai

- Monitored and traded **5 actively traded futures markets** including Live Cattle (LE), Feeder Cattle (GF), Lean Hogs (HE), Gold (GC), and Silver (SI).
- Analyzed and executed spread, butterfly (D-Fly), and multi-leg trading strategies using market structure, seasonality, basis relationships, and price action.
- Developed a **Python-based quantitative analytics dashboard** to evaluate commodity spreads using **Z-Score, regression (Beta), R^2 , rolling mean, and standard deviation** across multiple time windows, generating trade signals and automated market interpretations.
- Monitored trading activity, investigated executions and fills, troubleshooted algorithmic trading systems, and identified execution anomalies while managing trade risk.
- Tracked fundamental market drivers including USDA reports, supply-demand dynamics, weather developments, and macroeconomic events to support discretionary and quantitative trading decisions.

Remote Tech Intern

Jul 2025 – Dec 2025

Aletheions (US-Based FinTech Company)

- Developed and enhanced the Aletheions India website using **React.js, JavaScript, HTML5, CSS3, and Tailwind CSS**, delivering responsive and production-ready user interfaces.
- Integrated frontend components with backend services and **REST APIs**, enabling dynamic content delivery and seamless business workflows.
- Leveraged **Generative AI** and prompt engineering techniques to accelerate feature development, debugging, code optimization, and documentation, improving development efficiency.
- Optimized website performance, SEO, and mobile responsiveness while collaborating with senior developers throughout the complete software development lifecycle, from development and testing to deployment and maintenance.

PROJECTS

RidePlus – AI-Powered RO water purifier booking platform

[Link](#)

React.js — JavaScript — Tailwind CSS — Supabase — Vercel — GenAI

- Developed a responsive RO water purifier booking platform using **React.js** and **Tailwind CSS** with **15+ reusable UI components** for a seamless cross-device experience.
- Integrated **Supabase** for authentication, real-time database management, and backend services to manage users, products, bookings, and application data.
- Designed and implemented a **role-based Admin Panel** with CRUD operations for product management, enabling category assignment, pricing, discount configuration, detailed product descriptions, key features, and multi-image (**up to 4**) uploads backed by Supabase.
- Implemented **SEO optimization** through dynamically generated product slugs and structured URLs, improving search engine readability and product discoverability.
- Leveraged **Generative AI** to accelerate development, debugging, and code optimization, reducing development time by approximately 45%, deployed the application on **Vercel** using **Git/GitHub**.

UPI Transaction Risk Prediction System

[Link](#)

Python — Scikit-learn — Flask — Pandas

- Built an end-to-end UPI fraud prediction system using **10K+ transaction records**, achieving **92% accuracy, 90% precision, and 88% recall** for fraud classification.
- Engineered transaction-based features including **frequency, amount of irregularities, and temporal patterns**, improving fraud detection performance and model robustness.
- Developed a **Flask**-based web application for real-time fraud prediction, enabling instant transaction risk assessment through an intuitive user interface.
- Designed a modular machine learning pipeline for data pre-processing, model training, evaluation, and prediction, ensuring scalable and maintainable deployment.

SKILLS

Programming Languages: Python, JavaScript, SQL, Bash

Frontend: React.js, HTML5, CSS3, Tailwind CSS

Backend: Flask, Node.js, REST APIs

Databases: PostgreSQL, MySQL, SQLite, Supabase

Cloud & Tools: Git, GitHub, Vercel, Trading Technologies (TT)

AI & Data: Generative AI, Prompt Engineering, Pandas, NumPy, Scikit-Learn, Data Analysis, Data Visualization

Trading & Analytics: Futures Trading, Spread Trading, Butterfly Strategies (D-Fly), Market Structure Analysis, Trade Execution Analysis, Algorithm Monitoring

CERTIFICATIONS

Anthropic AI Certifications: Completed 12+ certifications covering Claude 101, Claude Code, Claude Platform, Claude API, Claude Cowork, MCP, AI Agents, Subagents, Agent Skills, Claude with Google Vertex AI, Claude with Amazon Bedrock and AI Fluency.
